

Lincoln County

The cumulative data collected allowed an interpretation of the resistivity and chargeability characteristics of the rocks at depth below said group of contiguous claims, and helped to define structural boundaries.

The names and qualifications of the individuals who conducted the survey and interpreted the data are given in Exhibit C which is attached hereto and made a part hereof by reference.

2) For the single, separate unpatented lode mining claim, Blue Nose #36, which previously lacked road access, approximately 2,500 feet of road was constructed to provide access. This road was constructed by an employee of Tennessee Tungsten, Inc. of Pioche, Nevada, at the request and expense of AMAX Exploration, Inc., using a Euclid C-6 Crawler tractor. This work was done on September 26, 1978 at a cost of not less than One Hundred Dollars (\$100.00).

3) For the contiguous group of three (3) unpatented lode mining claims, comprising Blue Nose #37 through #39, the existing access road was repaired and renewed, and a bedrock exposure was cut along a North 75° West trending mineralized fault that extends through parts of both Blue Nose #37 and #38. This work was carried out by an employee of Tennessee Tungsten, Inc. of Pioche, Nevada, at the request and expense of AMAX Exploration, Inc., using a Euclid C-6 Crawler tractor. It was completed on September 26, 1978 at a cost of not less than Three Hundred Dollars (\$300.00).

4) For the contiguous group of four (4) unpatented lode mining claims comprising Blue Nose #40 through #43, silver-bearing veins on claims Blue Nose #41 and #42 were opened up and exposed for subsequent mapping and sampling, and the existing access road to this contiguous group of claims from the main contiguous group (Blue Nose #1 through #35) was repaired and renewed. This work was completed on September 25, 1978 by an employee of Tennessee Tungsten at the request and expense of AMAX Exploration, Inc. and cost not less than Four Hundred Dollars (\$400.00).

5) For the contiguous group of three (3) unpatented lode mining claims comprising Blue Nose #44 through #46, the existing access road to them from the main group of claims (Blue Nose #1 through #35) was repaired and renewed, and two drill sites with access roads were constructed. One of the drill sites is adjacent to the major east-west trending vein on Blue Nose claim #44, and the other is on Blue Nose claim #45 adjacent to a continuation of the same vein. This work was carried out by an employee of Tennessee Tungsten, Inc. of Pioche, Nevada, at the request and expense of AMAX Exploration, Inc. and cost not less than Three Hundred Dollars (\$300.00). The work was completed on September 23, 1978 using a Euclid C-6 Crawler tractor.

— — — — — BOUNDARY OF BLUE NOSE #1 THROUGH BLUE NOSE #35 CONTIGUOUS CLAIM GROUP

Lincoln County

EXHIBIT C

The Induced Polarization survey was carried out by the following individuals who are employees of Applied Geophysical of Salt Lake City, Utah:

- 1) Fred Hilton - Crew Chief
Graduate geologist with eight years' experience in geophysics with Applied Geophysical Inc.
- 2) Pierre La Combe - Crew Member
Graduate geologist with a minor in geophysics having two years' experience in geophysics with Applied Geophysical Inc.
- 3) George Spiro - Crew Member
Technician with eight years' experience in geophysics with Applied Geophysical Inc.
- 4) Jim Sheridan - Crew Member
Working towards a degree in geophysics and currently employed by Applied Geophysical Inc.

The Induced Polarization data was interpreted by Frank P. Fritz, graduate geophysicist employed as Assistant Chief Geophysicist by AMAX Exploration, Inc.
